EDUCATION

Singapore Institute of Technology & University of Glasgow <i>BSc (Honours) in Computing Science</i>	September 2023 - Oct 2026 <i>Singapore</i>
Temasek Polytechnic <i>Diploma in Information Technology</i>	April 2018 - April 2020 <i>Singapore</i>

EXPERIENCE

Monetary Authority of Singapore <i>Cloud Engineering Intern</i>	Sept 2025 - Apr 2026 <i>Singapore</i>
---	--

- Built SSM automation workflows using Terraform across 50+ AWS accounts (Organizations) and servers, auditing resource compliance with automated alerting and remediation
- Automated patch compliance checks and S3 log collection using Ansible and Linux scripting

Roycemedia Technologies Pte Ltd <i>Part Time Software Developer</i>	July 2019 - March 2020 <i>Singapore</i>
---	--

- Refactored monolithic ASP.NET codebase into modular MVVM components across the system, improving long-term maintainability
- Built and deployed full-stack features (ASP.NET/C#), including Nginx deployment on Linux servers

TECHNICAL STRENGTHS

Programming:	Python, Kotlin, C#, Java, JavaScript
Databases:	SQL, Firebase, MongoDB
Tools/Platforms:	AWS, Kubernetes, Git, Linux, Docker, Ansible, Terraform, React

PROJECTS

Homelab

- Self-hosted a privacy-focused infrastructure stack (AdGuard Home, WireGuard, Nginx Proxy Manager) and service alternatives (Nextcloud, Forgejo, SearXNG) to reduce third-party dependency using Docker
- Designed an idempotent Ansible pipeline for one-command redeployment; operate 10+ service stacks across 20+ containers, continuously maintained

Earthquake Aftershock Prediction System

- Deployed a 4-node Kubernetes cluster on AWS simulating a seismic sensor network, streaming sample data via Kafka to a central node running an aftershock ML prediction model
- Integrated a Flask/Docker pipeline to ingest model output and visualize predicted affected areas on a web-based map interface

Diagram-to-IaC

- Cloud architecture diagram builder with drag-and-drop elements, built in React, converting diagrams into deployable Terraform HCL
- Supports core AWS resources (e.g. EC2, IAM, S3, VPC) with node-level customization (instance type, storage size, region) and nested security group membership
- Solo capstone project developed at and for MAS as project stakeholder
